

Jonatan Thorpe Plaza

SOFTWARE ENGINEER · APPLIED FULL-STACK & MACHINE LEARNING

Software engineer who builds AI systems for real businesses and runs them in production: an LLM that turns WhatsApp orders into structured data, now with pilot clients, and a fine-tuned receipt extraction pipeline. Java and Spring backend. Native Spanish and English.

— WORK EXPERIENCE

Junior Developer · Indra Producción Software

Jan 2021 - Oct 2021

- Contributor to Galileo, the European GNSS programme: a large-scale, multi-module system with strict reliability requirements.
- Backend development and maintenance in Java 8 with Spring and Oracle.
- Owned the integration of our module with the rest of the system, making sure every other module integrated correctly with ours.
- Took our modules to over 90% test coverage across unit and integration tests (JUnit5, Mockito).
- Database management, SQL queries and deployment on JBoss server.

Web Application Developer · All Natura S.L.

Oct 2020 - Jan 2021

- Web page design and layout.
- Customisation of the Odoo CRM.

Developer Intern · Star-Group

Apr 2020 - Jun 2020

- Individual development of a web application for an English academy (ASP.NET).
- Work under agile Scrum methodology.

— EDUCATION

BSc in Computer Engineering · University of Almería · 2021 - 2025

Software Engineering specialisation. Data Structures & Algorithms I-II (Java): heaps, balanced BSTs, hash tables and Bloom filters, graphs (Dijkstra, Prim, Kruskal, Floyd-Warshall) and B-Trees; divide and conquer, greedy, dynamic programming, backtracking and branch and bound, with complexity analysis.

Higher Technician in Multiplatform Application Development (DAM) · IES Los

Montecillos · 2018 - 2020

Technician in Microcomputer Systems & Networks (SMR) · IES Gerald

Brenan · 2016 - 2018

— PROJECTS

AI Order Automation

Spring Boot · React · MySQL · WhatsApp API (Meta) · DeepSeek · JWT · Docker

Need: orders arrived as informal WhatsApp messages and required manual transcription.

Build: Meta Cloud API integration capturing both client and business-sent messages; currently onboarding first pilot clients.

Flow: incoming WhatsApp message, text or voice note, transcribed with Whisper when it is audio, interpreted by the LLM, and persisted as a structured order in MySQL for a React dashboard behind JWT authentication.

Scannet — Final Degree Project (TFG)

React · Vite · Supabase · DeepSeek-OCR2 (LoRA) · RunPod · Vercel

Build: live and self-hosted, extracting merchant, VAT ID, date, items and totals as structured JSON from real receipts, with the training dataset augmented ~10x.

Flow: receipt photo, OCR text extraction, DeepSeek call that structures the fields, JSON persisted in Supabase and reviewed in a React/Vite front deployed on Vercel.

Web App for an English Academy · Star-Group internship

C# · ASP.NET MVC · SQL Server

Need: a local English academy needed to digitalise the management of its activity.

Online Store

Spring Boot · JSP · MySQL · Selenium (E2E)

Need: give a local business its own online sales channel.

Self-hosted Portfolio — jonatanthorpe.dev

React 19 · Vite · nginx · Hetzner VPS · TLS/certbot · GitHub Actions CI/CD · IaC

Build: Ubuntu VPS on Hetzner with nginx, Let's Encrypt TLS and automated deployments via GitHub Actions.

Job Search MCP Server

TypeScript · Model Context Protocol SDK · Node · stdio · node:test

Build: MCP server exposing typed tools with Zod-validated schemas over a Markdown vault, with pure-function core, unit tests and atomic writes.
